## HPLC Column Selection Chart

Dikma HPLC / UHPLC Column	General Description	Primary Features	Applications	Specifications	Page
Endeavorsil™ C18	1.8 µm UHPLC columns for improved resolution, throughput, and sensitivity as well as reduced solvent consumption	<ul style="list-style-type: none"> <li>Combined speed, resolution, and sensitivity</li> <li>Reduced analysis time and solvent waste</li> <li>High efficiency combined with high selectivity and productivity</li> <li>Superior column performance at higher pressure</li> <li>Excellent separation characteristics over wide pH range</li> </ul>	Separate hydrophobic and polar compounds in UHPLC system	USP Code: L1 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 1.8 µm Pore Size: 120 Å Surface Area: 300 m <sup>2</sup> /g Phase Density: 3.5 µmol/m <sup>2</sup> pH Range: 1.5-9 Carbon Loading: 20% Endcapping: Yes	5
Leapsil™ C18	2.7 µm HPLC / UHPLC compatible columns, low operating pressure	<ul style="list-style-type: none"> <li>Ultra fast separation without compromising resolution</li> <li>Compatible with all HPLC and UHPLC instruments</li> <li>Low operating pressure allows higher flow rates</li> <li>Method development flexibility use MeCN or MeOH without the limitations of backpressure and the need for elevated temperatures</li> <li>Wide pH stability</li> <li>Full spectrum of phases and selectivities</li> </ul>	Separate hydrophobic and polar compounds in HPLC system but get UHPLC results	USP Code: L1 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 2.7 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 3.9 µmol/m <sup>2</sup> pH Range: 1.5-10 Carbon Loading: 27% Endcapping: Yes	15
Inspire™ C18	Universal reversed-phase columns, very high carbon loading	<ul style="list-style-type: none"> <li>Rapid separations with outstanding resolution</li> <li>Advanced bonding technologies</li> <li>High efficiency and outstanding lifetime</li> <li>Excellent separation characteristics over wide pH range</li> <li>Superior batch-to-batch reproducibility</li> <li>Choose from a variety of phases and hardware formats</li> <li>pH range 1-11</li> </ul>	General purpose method development column. Excellent retention for hydrophobic and polar compounds	USP Code: L1 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 3.9 µmol/m <sup>2</sup> pH Range: 1-11 Carbon Loading: 27% Endcapping: Yes	21
Inspire™ C8	Universal C8 phase columns	<ul style="list-style-type: none"> <li>Rapid separations with outstanding resolution</li> <li>Advanced bonding technologies</li> <li>High efficiency and outstanding lifetime</li> <li>Excellent separation characteristics over wide pH range</li> <li>Superior batch-to-batch reproducibility</li> <li>Choose from a variety of phases and hardware formats</li> <li>pH range 1-11</li> </ul>	General purpose method development column. Less hydrophobic, and therefore, less retentive than C18 for most analytes	USP Code: L7 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 4.2 µmol/m <sup>2</sup> pH Range: 1-11 Carbon Loading: 17% Endcapping: Yes	21
Inspire™ HILIC <small>NEW</small>	Ideal for separating and retaining polar compounds that may not retain on traditional RP packings	<ul style="list-style-type: none"> <li>Unique selectivity and increased retention for highly polar compounds</li> <li>Increased sensitivity and lower detection limits with microbore</li> <li>Enhanced retention for hydrophilic / polar compounds</li> <li>Increased laboratory throughput and productivity</li> <li>Superior batch-to-batch reproducibility</li> <li>Suitable for the separation of hydrophilic compounds such as polar acids and bases, polar compounds, nucleosides, oligonucleotides, amino acids, peptides, and water-soluble vitamins</li> </ul>	Separation of polar and ionic compounds under RP conditions	Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g pH Range: 1.5-7.5 Endcapping: No	*

Dikma HPLC / UHPLC Column	General Description	Primary Features	Applications	Specifications	Page
Inspire™ Diol <small>NEW</small>	Suitable for RP, NP, and HILIC modes	<ul style="list-style-type: none"> <li>Monomerically bonded dihydroxypropyl group</li> <li>Ultra pure silica and unique bonding chemistry promote long column lifetime, excellent column reproducibility and high inertness without endcapping</li> <li>Unique selectivity for polar / hydrophilic compounds in RP, NP, and HILIC modes</li> <li>Lower polarity than unmodified silica and very easily wettable with water</li> <li>Higher retentivity than silica in NP mode and useful tool as preparative column owing to easy dry-up</li> </ul>	Separation of polar / hydrophilic compounds in RP, NP, and HILIC modes	USP Code: L20 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 2.1 µmol/m <sup>2</sup> pH Range: 2-7.5 Carbon Loading: 7.5% Endcapping: No	*
Spursil™ C18	Polar modified columns for use with 100% organic to 100% aqueous mobile phases	<ul style="list-style-type: none"> <li>Combine high purity silica with unique polar modification technology</li> <li>Unique selectivity and enhanced resolution</li> <li>Silanol shielding for excellent peak shape</li> <li>Improved water wettability and stable retention in highly aqueous mobile phase conditions</li> <li>Excellent retention for polar compounds</li> <li>Extended range pH stability</li> <li>Choose from a variety of selectivities and hardware formats</li> </ul>	Excellent retention for polar compounds. Can be used for challenging reversed-phase separations employing highly aqueous mobile phases	USP Code: L1 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 3.5 µmol/m <sup>2</sup> pH Range: 1.5-10 Carbon Loading: 25% Endcapping: Yes	31
Spursil™ C18-EP	Modified with alkyl amide groups, columns for use with 100% organic to 100% aqueous mobile phases	<ul style="list-style-type: none"> <li>Combine high purity silica with unique polar modification technology</li> <li>Unique selectivity and enhanced resolution</li> <li>Silanol shielding for excellent peak shape</li> <li>Improved water wettability and stable retention in highly aqueous mobile phase conditions</li> <li>Excellent retention for polar compounds</li> <li>Extended range pH stability</li> <li>Choose from a variety of selectivities and hardware formats</li> </ul>	Excellent selectivity for acids, bases, and polar compounds, especially phenols and amines. Compatible with 100% aqueous-phase composition	USP Code: L60 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 3.4 µmol/m <sup>2</sup> pH Range: 1.5-10 Carbon Loading: 24% Endcapping: Yes	31
Diamonsil® C18	Universal reversed-phase columns	<ul style="list-style-type: none"> <li>High efficiency</li> <li>Extended lifetime</li> <li>Outstanding selectivity</li> <li>Extreme resolution</li> <li>Excellent batch-to-batch reproducibility</li> </ul>	General purpose method development column	USP Code: L1 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 5 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Carbon Loading: 17% pH Range: 2-7.5 Endcapping: Yes	*
Diamonsil® C8	Universal reversed-phase columns	<ul style="list-style-type: none"> <li>High efficiency</li> <li>Extended lifetime</li> <li>Outstanding selectivity</li> <li>Extreme resolution</li> <li>Excellent batch-to-batch reproducibility</li> </ul>	General purpose method development column. Less hydrophobic, therefore, less retentive than C18 for most analytes	USP Code: L7 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 5 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Carbon Loading: 10% pH Range: 2-7.5 Endcapping: Yes	*

Dikma HPLC / UHPLC Column	General Description	Primary Features	Applications	Specifications	Page
Diamonsil® AAA	Amino Acid Analysis (AAA) columns	<ul style="list-style-type: none"> <li>High resolution and rapid analysis of 18 kinds of nature amino acids</li> <li>Outstanding selectivity and extreme resolution</li> <li>Excellent batch-to-batch reproducibility</li> </ul>	Suitable for the separation of amino acid	Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 5 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 3.93 µmol/m <sup>2</sup> Carbon Loading: 27% pH Range: 1.5-9 Endcapping: Yes	*
Platasil™ C18	Wide pH range reversed-phase columns	<ul style="list-style-type: none"> <li>Unique bonding technology prevents phase collapse, and allows stable retention in highly aqueous mobile phases</li> <li>Unique selectivity, excellent peak shape</li> <li>Enhanced retention of polar compounds</li> <li>High loadability</li> <li>pH range 1 - 11</li> <li>Reduced silanol interactions and improved peak shape for basic analytes</li> </ul>	Separation of basic and acidic compounds in high and low pH conditions to manipulate selectivity	USP Code: L1 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 5 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g pH Range: 1-11 Carbon Loading: 15% Endcapping: Yes	54
Platasil™ NH <sub>2</sub> <small>NEW</small>	Aminopropyl modified silica phase	<ul style="list-style-type: none"> <li>Aminopropyl modified silica phase for multi-mode chromatography (RP, NP, &amp; IC)</li> <li>Improved phase ruggedness and stability</li> <li>Excellent retention for polar compounds such as sugars, oligosaccharides, sugar alcohols and other hydroxyl compounds, as well as DNA bases under RP conditions and vitamins A &amp; D and hydrocarbons in the petroleum industry under NP conditions</li> </ul>	Separation of polar compounds such as sugars, oligosaccharides, sugar alcohols, and other hydroxyl compounds, as well as DNA bases, fat-soluble vitamin and hydrocarbons	USP Code: L8 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 5 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 3.2 µmol/m <sup>2</sup> pH Range: 2-7.5 Carbon Loading: 7% Endcapping: No	*
Platasil™ CN <small>NEW</small>	Monomerically bonded cyanopropyl group	<ul style="list-style-type: none"> <li>Monomerically bonded cyanopropyl group</li> <li>Exceptionally high surface coverage and alternative selectivity</li> <li>Low hydrophobicity for rapid elution of hydrophobic analytes</li> <li>More reproducible separations than silica for NP applications</li> <li>Multi-mode column (RP, NP, &amp; HILIC) widens scope of selectivity</li> <li>High retention capacity for polar and unsaturated compounds</li> <li>Excellent reproducibility and superior stability</li> <li>Quick equilibration and less sensitivity to small changes of the water content in the mobile phase</li> <li>Suitable for the separation of ionizable compounds such as basic drugs, organic acids, and steroids</li> </ul>	Separation of ionizable compounds such as basic drugs, organic acids, and steroids as well as carboxyl, carbonyl, and amine containing compounds	USP Code: L10 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 5 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g Phase Density: 4.8 µmol/m <sup>2</sup> pH Range: 1.5-7.5 Carbon Loading: 12% Endcapping: Yes	*
Platasil™ Silica <small>NEW</small>	High-purity silica packing	<ul style="list-style-type: none"> <li>High loading capacity and strong mechanical stability due to exceptionally stable silica packing</li> <li>Minimal peak distortion</li> <li>Useful for separating compounds differing in the number and type of the functional groups</li> <li>Suitable for the separation of stereoisomers as well as neutral and weakly acidic compounds</li> <li>Excellent batch-to-batch reproducibility</li> </ul>	Ideal for the rapid separation of low molecular weight compounds that are soluble in organic solvents	USP Code: L3 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 5 µm Pore Size: 100 Å Surface Area: 440 m <sup>2</sup> /g pH Range: 1.5-7.5 Endcapping: No	*

Dikma HPLC / UHPLC Column	General Description	Primary Features	Applications	Specifications	Page
Platisil™ PH <small>NEW</small>	Monomerically bonded phenyl group	<ul style="list-style-type: none"> <li>Monomerically bonded phenyl group</li> <li>Alternative selectivity from <math>\pi</math>-<math>\pi</math> interactions</li> <li>Exceptionally high surface coverage and superior stability</li> <li>Lower hydrophobicity than C8 columns for rapid elution of hydrophobic analytes</li> <li>Excellent resolution and reproducibility</li> <li>Suitable for the separation of polar compounds, aromatic compounds, and isomers</li> </ul>	Suitable for the separation of polar compounds, aromatic compounds, and isomers	USP Code: L11 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 5 $\mu$ m Pore Size: 100 $\text{\AA}$ Surface Area: 440 $\text{m}^2/\text{g}$ Phase Density: 4.1 $\mu\text{mol}/\text{m}^2$ Carbon Loading: 14% pH Range: 1.5-7.5 Endcapping: Yes	*
Bio-Bond™ C18	300 $\text{\AA}$ pore size silica C18 columns	<ul style="list-style-type: none"> <li>Direct scale-up to preparative material</li> <li>Outstanding reproducibility, efficiency, and column lifetime</li> </ul>	Analyze and purify proteins, peptides, and biomolecules	USP Code: L1 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 $\mu$ m Pore Size: 300 $\text{\AA}$ Surface Area: 100 $\text{m}^2/\text{g}$ Phase Density: 3.7 $\mu\text{mol}/\text{m}^2$ pH Range: 2-8 Carbon Loading: 8% Endcapping: Yes	52
Bio-Bond™ C8	300 $\text{\AA}$ pore size silica C8 columns	<ul style="list-style-type: none"> <li>Direct scale-up to preparative material</li> <li>Outstanding reproducibility, efficiency and column lifetime</li> </ul>	Analyze and purify proteins, peptides, and biomolecules	USP Code: L7 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 $\mu$ m Pore Size: 300 $\text{\AA}$ Surface Area: 100 $\text{m}^2/\text{g}$ Phase Density: 4.5 $\mu\text{mol}/\text{m}^2$ pH Range: 2-8 Carbon Loading: 5% Endcapping: Yes	52
Bio-Bond™ C4	300 $\text{\AA}$ pore size silica C4 columns	<ul style="list-style-type: none"> <li>Direct scale-up to preparative material</li> <li>Outstanding reproducibility, efficiency and column lifetime</li> </ul>	Analyze and purify proteins, peptides, and biomolecules	USP Code: L26 Base Material: Silica Particle Shape: Spherical Purity: 99.999% Particle Size: 3, 5, 10 $\mu$ m Pore Size: 300 $\text{\AA}$ Surface Area: 100 $\text{m}^2/\text{g}$ Phase Density: 4.4 $\mu\text{mol}/\text{m}^2$ pH Range: 2-8 Carbon Loading: 3% Endcapping: Yes	52

## Dikma HPLC / UHPLC Columns Selection by Manufacturer

Choosing an HPLC column from different manufacturers can be a very difficult process. The Dikma alternative phases listed below are selected based on a combination of physical and chemical similarities as well as mode of retention. These alternatives are not guaranteed to provide the same retention or selectivity, but should be suitably similar in character to allow a similar or improved separation to be achieved with some method optimization. The user should refer to the individual phase information to ensure that the characteristics of the alternative match the requirements of their separation.

The following table is not complete in terms of manufacturer or products offered. Although every effort is made to ensure that the product information provided is as accurate as possible, some errors may occur in collation and transcription. We can not accept any responsibility for the use of the following information.
